## How to use

Refer to Ideal Spotter Chart.

Apply spotter directly to stain. Allow time to penetrate. Gently work stain with a spotting bone, brush or Ideal roll-on applicator. Flush area with water or steam. Clean treated garments as normal.

Dyestuffs can often display poor fastness to spotting, so we recommend that seam tests are always carried out before application.

It's always better to clean as soon as possible after application.

You should only pre spot garments in time for the next load.

For further process information speak to an Ideal technical representative.

## Health & safety

Available on request. Store above 5°C.
