

WASH YOUR PROBLEM

GREYING & HARSHNESS

1-ITEM AFFECTED

Towels & table linen

2-CAUSE

Use of detergents with inadequate sequestering character results in soil residues and hardness salts being redeposited onto fabric, causing unsightly greying discoloration.

3-SOLUTION

Be aware of water hardness.

Use correct amount of appropriate detergent to ensure effective suspension and soil removal.

Once greying occurs, you will need to process linen with a high sequestering product coupled with a good high alkaline detergent to recover.

Everbrite and Prime in combination will recover colour of linen and impart a softness to fabric.

Do not use bleach.
