

Additional Equipment

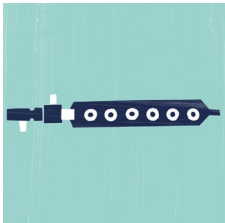

Diaphragm Pump (High Flow Only)

Designed to deliver excellent flow rate consistency, even with highly viscous products such as liquid starch, emulsifier and one shot laundry detergent.

Sharing all of the tried and tested components of the established peristaltic pump range, the diaphragm pump allows for an easy upgrade, with the opportunity to mix and match up to 10 pumps for a versatile dosing system with a reduced servicing demand

Flush Manifold (High/Low Flow)

The flush manifold uses water pressure to consistently pump laundry products over a long distance, reducing the number of tubes traversing washroom area. Instead, laundry product dosing can be located in a single designated area.

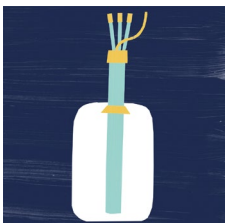

The flush manifold is compatible with both high and low flow pump units and is available with a flow safety stop switch and multiple connection sizes.

Low Level Alarm

Connected to a dosing unit, or with its own power supply a low level alarm will monitor the level of up to 10 products. It will trigger a buzzer and a flashing light to alert laundry staff if a product is about to run out.

Suction Lance

The suction lance allows you to distribute up to three dosing units from one drum. When connected to the alarm system it will sound a buzzer when the product reaches a critically low level.
