

# WASH YOUR PROBLEM

## MILDEW

### 1-ITEM AFFECTED

Restaurant & hotel linen

### 2-CAUSE

Presence of proteinaceous soiling.  
Should be washed immediately, with correct process.  
If left in damp, warm conditions bacteria multiply at the rate of  $10^{27}$  resulting in foul odour.  
Bacteria continue to feed on fabric.

### 3-SOLUTION

To remove mildew, soak in alkali and dry bleach (use Coloursafe for sensitive coloured fabrics).  
Prevention is better than cure.  
Apply a *mildewstat* after processing, to enable bacteriostasis.  
Use Bacstat 2 in the final rinse to enable a bactericidal monolayer.
